

EmxFile com
the openpyx
by calling

Txt file with genes (tsv)

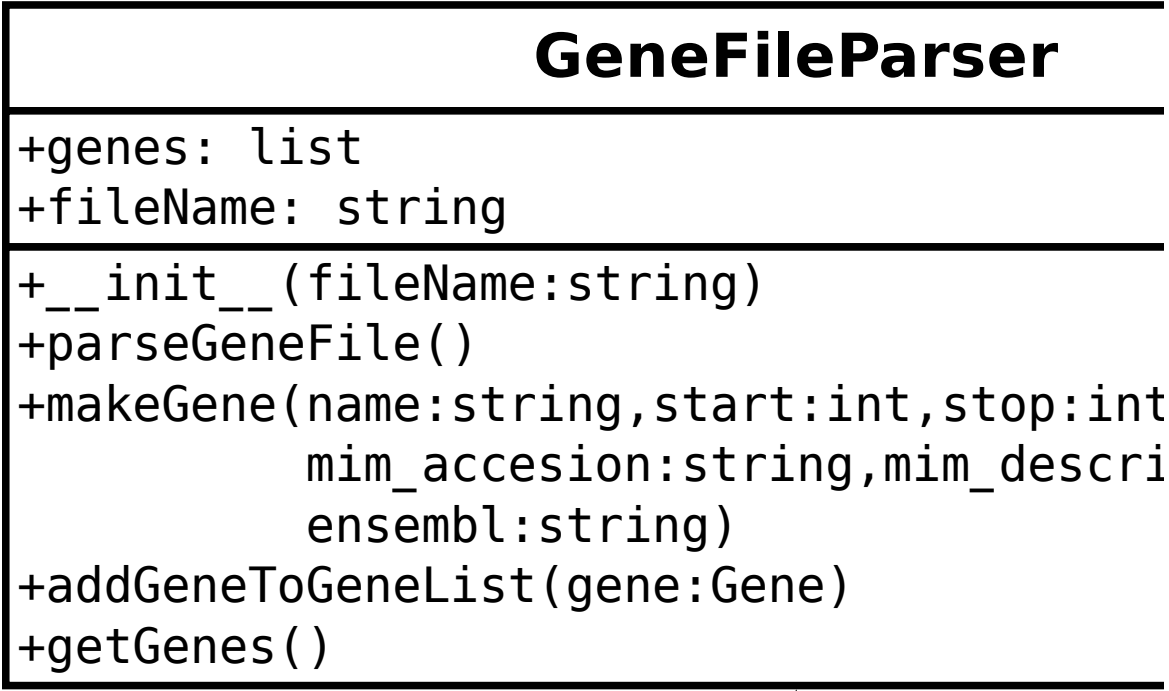

Input

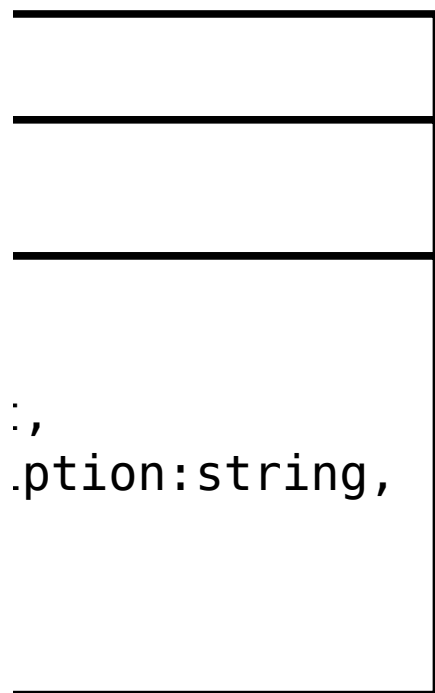

EMX file with tables (XSLX)

municates with
l library and
the functions of

+wc
+ge
+at
+ge
+fi

.,
.ption:string,

GeneFileParser make
with Gene objects

+name: string
+start: int
+stop: int
+mim_accesion
+mim_descript

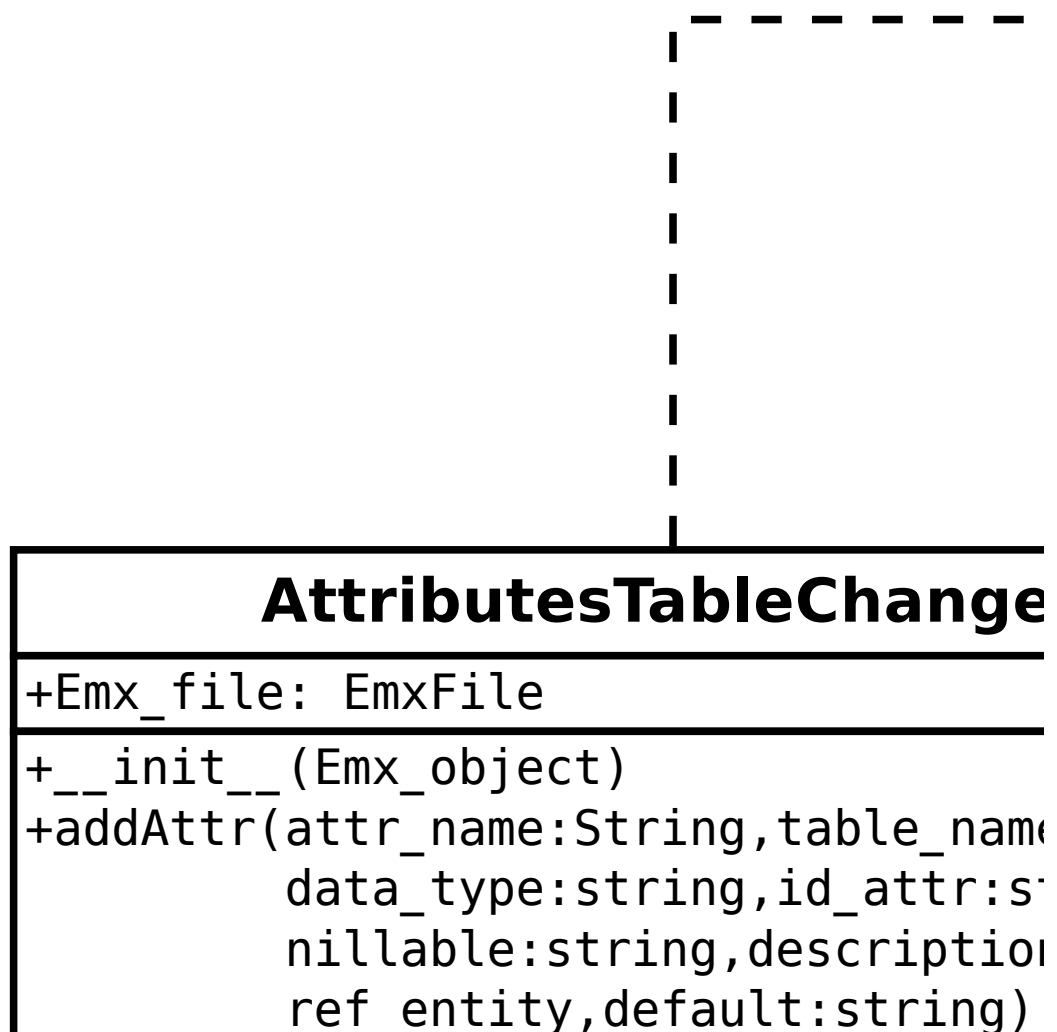

s a list

Gene

```
: string = ""  
ion: string = ""  
.....
```

that object
can as well
but not dir

Library: openpyxl

```
__init__(fileName:string)
getWorkbook(workbook_name)
getGenesSheet()
getAttrSheet()
getGenoRefSheet()
saveFileChanges()
getWorkbook()
getAttrSheet()
getGenesSheet()
getGenoRefSheet()
```

GenesTable
GenesToGenes
list with
is created

er

e:string,
tring,
n:string,

Maker and
RefAppender need the
Gene objects that
d by GeneFileParser

! - -> +ensembl: str
+__init__(name: str, mim: str, ens: str)
+getName()
+getStart()
+getStop()
+getMimAccession()
+getMimDescription()
+getEnsembl()

GenesTableMaker

+table: dict
+Emx_object: EmxFile
+__init__(genes: list, Emx_obj: EmxFile)
+setName(name: string, cell: string)
+setStart(start: string, cell: string)
+setStop(stop: string, cell: string)
+setMorbidityAccession(MA: string, cell: string)
+setMorbidityDescription(MD: string, cell: string)
+setEnsembl(ensembl: string, cell: string)
+saveTable()
+processGenes()

ing

e:string,start:int,stop:int,
_acc:string,mim_desc:string,
embl:string)

on()

ption()

ing)
string)
g)

```
+addStartAttr()  
+addStopAttr()  
+addMimAccesionAttr()  
+addMimDescriptionAttr()  
+addEnsemblAttr()  
+addGeneRef()
```

GenesToGeno

+emx_obj: EmxFile

+sheet

+genes: list

+__init__(emx_obj:EmxF

+compareGeneToGenotype

+getStartsOfGenotype()

+getStopsOfGenotype()
